Medical Officer
Royal Australian Navy Reserve

Associate Lecturer
Australian National University

BIOGRAPHY

Dr Tobias Angstmann is a specialist clinician with a focus on innovation and development. Working across both the clinical and administrative dimensions of medicine, he brings expertise and understanding to health-related projects.

Dr Angstmann is an Obstetrician & Gynaecologist experienced in the operation of both public and private Australian health care systems. What sets him apart is his passion for bringing engineering principles into health system design, operation and evaluation. Building clinical governance structures into clinical systems, from inception to operation, and using linear programming techniques to optimise resource allocation.

Active in clinical practice, medico-legal reporting, education, administration and clinical governance, Dr Angstmann understands the multiple dimensions of health care. The human factor elements of performance in this environment are another area of expertise. Dealing with critical incidents, simulation and root cause analysis are all tools used to effect change. He also is a software developer and web designer who seeks to deploy information systems that work efficiently and seamlessly.
